Upgrade Guide

This document explains how to upgrade the 01V96i system software to the latest version.

● **Precautions (please be sure to read these precautions)**

• The user assumes full responsibility for the upgrade.

• Back up important data before upgrading.

• If you fail to follow these instructions properly, or turn off the 01V96i or disconnect the USB cable while the upgrade is in progress, the 01V96i may be damaged.

• This software is for upgrading the 01V96i system software from a computer via USB. MIDI drivers other than the Yamaha Steinberg USB driver cannot be used.

• If the upgrade fails while the new system software is being transferred to the 01V96i due the power being turned off, the USB cable disconnected, etc., when the 01V96i is turned back on again it will startup in download mode, not normal mode. In this case you should reconnect the cable and perform the upgrade again.

• If the 01V96i does not work properly after upgrading, and you've tried upgrading several times, please contact your Yamaha dealer.
