

# Yamaha Premium Synthetic Valve Oils

When you are performing, you want to focus on making music, not worry about sticky valves. Yamaha drew upon decades of experience manufacturing horns for some of the most demanding players in the world to create a line of 100% synthetic valve oils designed specifically for musical instruments.

# Yamaha Premium Synthetic Valve Oils

- Long lasting, fast action, smooth response
- Four viscosities to fit your playing needs
- Great for extreme conditions
- Corrosion inhibitor protects your valves
- Childproof caps on every bottle

## Super Light – YAC SVOX

The super light oil has an extra thin viscosity for players with very tight valves or who prefer an extremely light touch.

## Light – YAC LVOX

The light oil has a thinner viscosity that's ideal for instruments with very precise valve tolerances, including all Yamaha professional models.

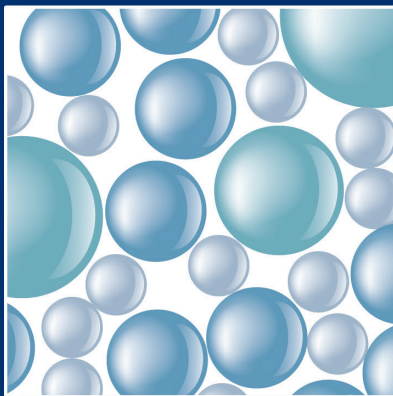

## Regular – YAC RVOX

The regular oil has a medium viscosity intended for all-around use in standard valves. A great choice for student instruments of any brand.

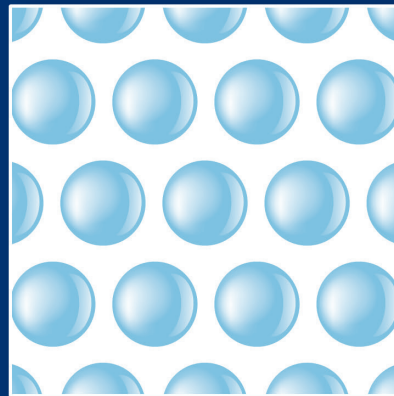

## Vintage – YAC WVOX

The vintage oil has a heavier viscosity that works well on older instruments with looser valves or larger horns such as tubas and euphoniums.

In regular mineral oils the molecules aren't an equal size or weight, making them evaporate at different rates. As smaller molecules evaporate faster, the surface of the valves dries out quickly, making the action feel sticky or slow over time.

With Yamaha synthetic oils, the size and weight of the molecules are equal. This keeps the oil stable and consistent in even the most demanding situations, making your valves feel smooth for far longer.

Yamaha offers a full line of other synthetic lubricants, including oils for rotary valves as well as greases and oils designed specifically for tuning slides.
